Product Details

- Designed for 1X Objective Power
 - 1, 5, or 10mm Scale Versions
 - 0.1 or 0.5 Inch Scale Versions
- Reticles are clear glass discs marked with scales or patterns, which fit into microscope eyepieces at the internal real image plane. This is the intermediate image of the specimen/object under inspection produced by the objective lens of the microscope. By placing the reticle at this position, the scale/pattern is superimposed on the image and both are in simultaneous focus. These reticles are all designed for an objective power of 1X.
