General

Type:
Single Stage Optical Isolator

Style:
Faraday

Physical & Mechanical Properties

Length (mm):
13.10

Clear Aperture CA (mm):

3.5

Diameter (mm):

11.60

Optical Properties

Minimum Transmission (%):

>70

Design Wavelength DWL (nm):

780

Damage Threshold, By Design:

60 W/cm^2 @ DWL

Minimum Isolation at Design Wavelength (dB):

>30

Environmental & Durability Factors

Operating Temperature (°C):

+15 to +40

Regulatory Compliance

Certificate of Conformance:

View

Product Details

- Small, <1cm³, Form Factor
- Greater than 70% Minimum Transmission and >30dB Minimum Isolation
- Input Apertures as Low as 1.60mm

Mini Free-Space Optical Isolators are designed around a less than 1cm³ form factor with an incorporated Faraday Rotator while maintaining a superior performance with high isolation, transmission, and power densities. These isolators effectively reduce feedback in the external cavity of diode laser systems and blocks reflections from free-space fiber coupling. Designed to be resistant to environmental temperature changes these isolators are capable of integration into systems with where fluctuating temperatures are a concern. Mini Free-Space Optical Isolators increase power stabilization in optical systems and also eliminate feedback-induced damage to sensitive optical components. These isolators are ideal for quantum technology applications such as quantum communication, simulation, cryptography, sensors, computing, and networks.
