PRODUCT DETAILS

- 12.33 Megapixel Sony IMX500 Intelligent Vision CMOS Sensor
- Power Over Ethernet (PoE) for Easy Integration
- Compact 55 x 40 x 35 mm Form Factor
- Sony **ATRIOS** Software is Required for Use

LUCID Vision Labs™ SENSAIZ Intelligent Vision CMOS Camera integrates Sony's IMX500 sensor and ATRIOS software platform to migrate image processing and AI image analysis directly to the camera without the need for external processing or memory. Sony's IMX500 CMOS sensor is designed with a stacked pixel chip and logic chip to place AI capabilities directly on the sensor, greatly reducing processing time and increasing security. This intelligent vision sensor shifts many of the standard image processing steps from a cloud-based system onto the camera itself, capturing the information and meaning of an image and allowing for only the necessary data to be output. This provides lower latency, offline image processing, increased security, reduced power requirements, and lower cost. Sony's ATRIOS software platform provides an all-in-one place for device management, AI development, and system and cloud integration. LUCID Vision Labs™ SENSAIZ Intelligent Vision CMOS Camera features a built-in camera lens, lightweight and compact housing, and Ethernet PoE connection for simple system integration. This camera is ideal for a wide range of applications from security and manufacturing to automation and robotics.

NOTE: SENSAIZ cameras can only be used with Sony's **ATRIOS** software platform. ATRIOS software can be purchased directly through Sony. See the Technical Images tab for mounting instructions.

TECHNICAL INFORMATION

Step. 1
Pass cable through back case bracket

Important!

Use only "bootless" cable

Make sure LEDs are at the bottom

Top
↑
Proper Orientation
↓
Bottom

During installation and placement of the camera, do not hit or cause physical stress on the lens as this might affect optical performance.

Step. 2
Adjust the cable orientation to fit into the one of the case's grooves or straight through, depending on your mounting surface.

Step. 3
Mount back case bracket to surface using the screw holes.
Use #8 or similar screw, head size up to 8.5mm, mounting screws sold separately.

Step. 4
Connect the cable and camera together.

Connect cable to Ethernet port.

Attach camera front to back case.
